

Building Pool Checklist

By Taylor Peterson

- ☐ Location of the Pool
 - ☐ Put the pool in a place which is easily accessible to diggers and concrete mixers.
 - ☐ Choose a flat spot without stones.
 - ☐ Avoid places where leaves can easily fall in.
 - ☐ Check the water level before you dig the hole.
- ☐ Choosing a Pool
 - ☐ Ask for planning permission.
 - ☐ Decide on the pool you want.
 - ☐ If you want to use the pool for the summer, decide by the end of February where you will buy it from.
 - ☐ Allow a month for delivery.
- ☐ Building a Pool
 - ☐ Dig the hole big enough, don't dig it too large.
 - ☐ Carefully measure the depth of the pool and make sure the bottom is flat.
 - ☐ Find someone who needs earth and will come and take it away for free.
 - ☐ Don't take it all away - you're bound to need some of it back later.
 - ☐ Make sure you get the list of parts and you know what's what before you start.
 - ☐ Take some polystyrene blocks, lay them out in the shape of your pool.
 - ☐ Stand the concrete panels in the blocks and fix them together with metal braces.
 - ☐ Cut the panels for the skimmer and for the various openings such as the water jets.
 - ☐ Put a row of polystyrene blocks on the top of the concrete panels.
 - ☐ Wrap lengths of iron rod around the base of the concrete columns and around the tops of them.
 - ☐ Lay the iron meshing on the bottom of the pool.
 - ☐ Concrete around the bottom of the panels, then concrete the floor.
 - ☐ Put plastic panels in grooves on the back of the concrete panels, to create perpendicular pockets behind the place where the panels meet.

- ☐ Once the concrete is dry you can cut out and install the skimmers.
- ☐ Attach all the pipes.
- ☐ Fill up the cracks between the concrete panels with filler.
- ☐ Make sure that the whole pool (walls and floor) are clean and smooth before applying the revetement.
- ☐ Apply one coat of revetement, then cover it with something that looks like fabric, then repaint over the top of this.
- ☐ Allow a week for it to dry before filling up the pool.
- ☐ Set up the pump, the filter and figure out which pipe goes where.
- ☐ Set up the electricity box and get an electrician to do the necessary wiring.
- ☐ Landscaping a Pool
 - ☐ Decide what you're going to put around the pool.
 - ☐ Avoid using the ugly concrete slabs; Use concrete slabs which resemble real stone instead.
